

# **Quantitative general adaptation**

Guibert U. Crevecoeur

# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction</b>                     | <b>7</b>  |
| <b>2</b> | <b>Bathtub curve</b>                    | <b>15</b> |
| 2.1      | Learning curve . . . . .                | 15        |
| 2.2      | Bathtub curve . . . . .                 | 19        |
| 2.3      | Modified Weibull distribution . . . . . | 21        |
| <b>3</b> | <b>Creep curve</b>                      | <b>29</b> |
| 3.1      | Creep curve . . . . .                   | 29        |
| 3.2      | Reliability growth . . . . .            | 44        |
| 3.3      | Creep data . . . . .                    | 47        |
| 3.4      | Critical time and necking . . . . .     | 51        |
| 3.5      | Bi-logarithmic diagrams . . . . .       | 54        |
| 3.6      | Other applications . . . . .            | 60        |
| <b>4</b> | <b>Feedback loops</b>                   | <b>71</b> |
| 4.1      | In quest of a definition . . . . .      | 71        |
| 4.2      | First order feedback . . . . .          | 75        |
| 4.3      | Higher order feedback . . . . .         | 81        |

|          |                                       |            |
|----------|---------------------------------------|------------|
| 4.4      | Interpretation of learning . . . . .  | 86         |
| 4.5      | Envelope curve . . . . .              | 89         |
| 4.6      | Examples of envelope curves . . . . . | 99         |
| <b>5</b> | <b>Hubble constant</b>                | <b>107</b> |
| 5.1      | Main considerations . . . . .         | 107        |
| 5.2      | Scale factor . . . . .                | 109        |
| 5.3      | Classical approach . . . . .          | 111        |
| 5.4      | System approach . . . . .             | 118        |
| 5.5      | Transition to transparency . . . . .  | 123        |
| 5.6      | Comments . . . . .                    | 127        |
| <b>6</b> | <b>Two curves in biology</b>          | <b>141</b> |
| 6.1      | Generalities . . . . .                | 141        |
| 6.2      | Biological systems . . . . .          | 142        |
| 6.3      | Three stages in biology . . . . .     | 145        |
| 6.4      | Characteristics of systems . . . . .  | 158        |
| 6.5      | Model of biological ageing . . . . .  | 167        |
| 6.6      | Comparison with laws . . . . .        | 172        |
| 6.7      | Lifespan and longevity . . . . .      | 174        |
| <b>7</b> | <b>Lifetime predictions</b>           | <b>181</b> |
| 7.1      | Preamble . . . . .                    | 181        |
| 7.2      | Experimental determination . . . . .  | 182        |
| 7.3      | Instability time . . . . .            | 187        |
| 7.4      | Prediction for a system . . . . .     | 194        |
| 7.5      | Prediction using a plateau . . . . .  | 197        |
| 7.6      | Normalized graphs . . . . .           | 202        |
| 7.7      | New curves for creep . . . . .        | 206        |

|   |            |
|---|------------|
| <b>CONTENTS</b>                                 | <b>5</b>   |
| 7.8 Prediction for a class of systems . . . . . | 209        |
| 7.9 Falsifiability . . . . .                    | 210        |
| <b>8 Possible links</b>                         | <b>217</b> |
| 8.1 Punctuated equilibrium . . . . .            | 218        |
| 8.2 Statistical physics . . . . .               | 228        |
| 8.3 Chaos theory . . . . .                      | 239        |
| 8.4 Quantum mechanics . . . . .                 | 242        |
| <b>9 Conclusions</b>                            | <b>261</b> |
| <b>A Creep at VHT</b>                           | <b>265</b> |
| <b>B Fatigue</b>                                | <b>289</b> |
| <b>C Cosmological constant</b>                  | <b>301</b> |
| <b>D Genesis of an equation</b>                 | <b>311</b> |
